

SCENARIO 1 : LOGIN/SIGNUP

Context:

Priya is a final-year engineering student who needs to print her project report. A friend recommended an online Xerox service for its convenience and pricing. It's her first time using the website, and she needs to create an account to place an order.

Scenario:

- As a first-time user, Priya needs to sign up. She first explores the homepage to understand the services offered and check the pricing. Visibility of services and costs upfront is crucial for her to trust the platform.
- Feeling confident, she clicks the "Login/Signup" button in the top-right corner. The system presents her with two clear tabs: "Login" and "Sign Up." She selects the "Sign Up" tab.
- The form asks for her name, email, and a password. As she types her password, a real-time feedback mechanism shows its strength (Weak, Medium, Strong) along with the requirements (e.g., 8 characters, 1 uppercase, 1 number). This helps her create a secure password without the frustration of submitting and failing.
- The "Confirm Password" field has a feature that checks for a match as she types. A green checkmark appears when the passwords match, preventing a common user error.

- After filling the form, the "Sign Up" button, which was previously disabled (an example of a constraint to prevent incomplete submissions), becomes active. She clicks it.
- The system immediately provides positive feedback: "Account Created Successfully! Please log in to continue." This confirms her action was successful.
- She is automatically redirected to the "Login" tab. She enters her newly created credentials. To aid users who may have forgotten their password even after just creating it, a clearly visible "Forgot Password?" link is present.
- Upon successful login, she is taken to her personal dashboard, which greets her with "Welcome, Priya!" This personalization confirms she is in the correct account and makes the experience more engaging. She is now ready to upload her report.

SCENARIO 2 : MANAGING DOCUMENT UPLOADS

Context:

Mr. Sharma, an office administrator, needs to print and bind 5 different department reports for a board meeting. He has logged into the Xerox Management System to complete this task efficiently.

Scenario:

- From his dashboard, Mr. Sharma clicks the prominent "New Order" button. This takes him to the upload interface. The design provides multiple, clear options for uploading, catering to different user habits.
- He sees a large "Drag and Drop Files Here" area, a primary "Browse Files" button, and smaller icons for importing from Google Drive and Dropbox. This flexibility allows him to upload documents from various sources seamlessly.
- Two of his reports are in a folder on his desktop. He simply selects them and drags them into the drop zone. The other three are on his Google Drive. He clicks the Google Drive icon, authenticates his account in a pop-up, and selects the remaining files.
- As files upload, a progress bar appears next to each filename, providing clear feedback on the status. Once an upload is complete, a green "Uploaded" status appears.

- After all 5 documents are uploaded, they appear in a list. Each item in the list shows the filename, number of pages, and a set of configuration options: "Copies," "Color/B&W," "Paper Size," "Binding Type," and a "Remove" button. This consistent layout makes it easy to configure each document.
- He needs 10 copies of each report. Instead of setting it 5 times, he uses the "Apply to All" feature at the top of the list to set the number of copies to 10 for all documents at once. This design consideration saves significant time and effort.
- He then individually sets the binding type for each report (e.g., Spiral, Comb). As he selects options, the total estimated cost, displayed on the right side of the screen, updates in real-time. This visibility of cost implications helps him stay within his budget.
- Once satisfied, he clicks "Proceed to Payment."
